Fundamentals of Brain Network Analysis By Alex Fornito, Andrew Zalesky, Edward Bullmore

Fundamentals of Brain Network Analysis is a comprehensive and accessible introduction to methods for unraveling the extraordinary complexity of neuronal connectivity. From the perspective of graph theory and network science, this book introduces, motivates and explains techniques for modeling brain networks as graphs of nodes connected by edges, and covers a diverse array of measures for quantifying their topological and spatial organization. It builds intuition for key concepts and methods by illustrating how they can be practically applied in diverse areas of neuroscience, ranging from the analysis of synaptic networks in the nematode worm to the characterization of large-scale human brain networks constructed with magnetic resonance imaging. This text is ideally suited to neuroscientists wanting to develop expertise in the rapidly developing field of neural connectomics, and to physical and computational scientists wanting to understand how these quantitative methods can be used to understand brain organization.

- Extensively illustrated throughout by graphical representations of key mathematical concepts and their practical applications to analyses of nervous systems
- Comprehensively covers graph theoretical analyses of structural and functional brain networks, from microscopic to macroscopic scales, using examples based on a wide variety of experimental methods in neuroscience
- Designed to inform and empower scientists at all levels of experience, and from any specialist background, wanting to use modern methods of network science to understand the organization of the brain

Editorial Review

Review

"...this text promises to be an essential title on the bookshelf of the intellectually curious neuroscientist. And for those whose curiosity is never satiated, the book motivates new empirical work to address as yet unanswered questions…" **--Brain,** *Fundamentals of Brain Network Analysis*

...a thorough and didactic presentation of the tools available to research scientists wishing to engage in the emgerging field of network neuroscience...this text promises to be an essential title on the bookshelf of the intellectually curious neuroscientist...as with any good book, one turns the final page wishing there were more. -

About the Author
Alex Fornito completed a PhD in the Departments of Psychology and Psychiatry at the University of Melbourne, Australia, followed by Post-Doctoral training at the University of Cambridge, UK. He is an associate professor, Australian Research Council Future Fellow, and Deputy Director of the Brain and Mental Health Laboratory in the Monash Institute of Cognitive and Clinical Neurosciences, Australia. Alex's research uses cognitive neuroscience, network science, and graph theory to understand brain network organization in health and disease. He has published over 100 scientific articles, much of which are focused on the development and application of new methods to understand how brain networks dynamically adapt to changing task demands, how they are disrupted by disease, and how they are shaped by genetic influences.

Andrew Zalesky completed his PhD in the Department of Electrical and Electronic Engineering at the University of Melbourne, Australia. He works with neuroscientists, utilizing his engineering expertise in networks to understand human brain organization in health and disease. He has developed widely used methods for modeling and performing statistical inference on brain imaging data. His methods are utilized to investigate brain connectivity abnormalities in disease. He identified some of the first evidence of connectome pathology in schizophrenia. Andrew currently holds a fellowship from the National Health and

Medical Research Council of Australia. He is based at the University of Melbourne and holds a joint appointment between the Melbourne Neuropsychiatry Centre and the Melbourne School of Engineering. He leads the Systems Neuropsychiatry Group.

Ed Bullmore trained in medicine at the University of Oxford and St Bartholomew's Hospital, London, and then in psychiatry at the Bethlem Royal and Maudsley Hospital, London. In 1993, he was a Wellcome Trust (Advanced) Research Fellow at the Institute of Psychiatry, King's College London, where he completed a PhD in the statistical analysis of MRI data, before moving to Cambridge as Professor of Psychiatry in 1999. Currently, he is co-Chair of Cambridge Neuroscience, Scientific Director of the Wolfson Brain Imaging Centre, and Head of the Department of Psychiatry in the University of Cambridge. He is also an honorary Consultant Psychiatrist, and Director of R&D in Cambridgeshire and Peterborough Foundation NHS Trust. Since 2005, he has worked half-time for GlaxoSmithKline, currently focusing on immuno-psychiatry. He has been elected as a Fellow of the Royal College of Physicians, the Royal College of Psychiatrists, and the Academy of Medical Sciences. He has published about 500 scientific papers, and his work has been highly cited. He has played an internationally-leading role in understanding brain connectivity and networks by graph theoretical analysis of neuroimaging and other neuroscientific datasets.

Users Review

From reader reviews:

John Alfaro:

This Fundamentals of Brain Network Analysis tend to be reliable for you who want to be described as a successful person, why. The reason why of this Fundamentals of Brain Network Analysis can be among the great books you must have is definitely giving you more than just simple examining food but feed a person with information that perhaps will shock your prior knowledge. This book is definitely handy, you can bring it everywhere and whenever your conditions in the e-book and printed people. Beside that this Fundamentals of Brain Network Analysis forcing you to have an enormous of experience for example rich vocabulary, giving you trial run of critical thinking that we understand it useful in your day action. So , let's have it and enjoy reading.

Matthew Coleman:

The guide with title Fundamentals of Brain Network Analysis includes a lot of information that you can discover it. You can get a lot of profit after read this book. This book exist new information the information that exist in this guide represented the condition of the world now. That is important to yo7u to learn how the improvement of the world. That book will bring you with new era of the the positive effect. You can read the e-book in your smart phone, so you can read the item anywhere you want.

Guadalupe Leatherman:

Why? Because this Fundamentals of Brain Network Analysis is an unordinary book that the inside of the e-book waiting for you to snap the idea but latter it will jolt you with the secret this inside. Reading this book next to it was fantastic author who write the book in such wonderful way makes the content on the inside easier to understand, entertaining method but still convey the meaning totally. So , it is good for you for not hesitating having this any longer or you going to regret it. This book will give you a lot of gains than the

other book have such as help improving your talent and your critical thinking approach. So , still want to hesitate having that book? If I had been you I will go to the reserve store hurriedly.

Lionel Huggins:

In this period of time globalization it is important to someone to obtain information. The information will make a professional understand the condition of the world. The healthiness of the world makes the information much easier to share. You can find a lot of personal references to get information example: internet, newspapers, book, and soon. You will see that now, a lot of publisher this print many kinds of book. The particular book that recommended to your account is Fundamentals of Brain Network Analysis this book consist a lot of the information of the condition of this world now. This specific book was represented how can the world has grown up. The terminology styles that writer use to explain it is easy to understand. The writer made some exploration when he makes this book. That is why this book suitable all of you.
