## Clinical Decision Making: Case Studies in Maternity and Women's Health (Clinical Decision Making Series) By Diann S. Gregory

Created especially for nurses, the Clinical Decision Making series helps to bridge the gap between content knowledge and clinical application. Case Studies in Maternity & Women's Health is the first installment in this innovative series, which provides over forty maternity and women's health case histories, questions, and responses based on real life client situations. Every case contains an introductory "blueprint" of variables that must be considered while evaluating a particular scenario, which are pertinent concerning the client, nursing protocol, and setting of care. Examples of these variables include age, gender, or culture of the client, the client with a pre-existing condition, legal issues, or communication skills. Each blueprint and case is different, just as each clinical situation is unique to others. By allowing learners to simulate the actual decision-making process, they can gain a comfort level to make informed clinical judgments that will help them become successful nurses. Quite simply, Clinical Decision Making shortens the distance between the classroom and nursing practice like no other educational tool.
