Microsoft .NET - Architecting Applications for the Enterprise (Developer Reference) By Dino Esposito, Andrea Saltarello

A software architect's digest of core practices, pragmatically applied

Designing effective architecture is your best strategy for managing project complexity—and improving your results. But the principles and practices of software architecting—what the authors call the “science of hard decisions”—have been evolving for cloud, mobile, and other shifts. Now fully revised and updated, this book shares the knowledge and real-world perspectives that enable you to design for success—and deliver more successful solutions.

In this fully updated Second Edition, you will:

- Learn how only a deep understanding of domain can lead to appropriate architecture
- Examine domain-driven design in both theory and implementation
- Shift your approach to code first, model later—including multilayer architecture
- Capture the benefits of prioritizing software maintainability
- See how readability, testability, and extensibility lead to code quality
- Take a user experience (UX) first approach, rather than designing for data
- Review patterns for organizing business logic
- Use event sourcing and CQRS together to model complex business domains more effectively Delve inside the persistence layer, including patterns and implementation.

Editorial Review

About the Author

Dino Esposito a well-known web and mobile development expert, has written several popular books, including Architecting Mobile Solutions for the Enterprise and Programming Microsoft ASP.NET MVC. In addition to writing and speaking, he is founder and CTO of a software and IT services firm serving the professional sports industry.

Andrea Saltarello is CEO, founder, and solution architect for a software design and development consultancy. He is an active speaker and trainer, as well as the lead developer on an open-source project focused on developing extensions to the ASP.NET MVC toolkit.

Users Review

From reader reviews:

Kathleen Land:

A lot of people always spent their own free time to vacation or go to the outside with them loved ones or their friend. Are you aware? Many a lot of people spent they free time just watching TV, as well as playing video games all day long. If you would like try to find a new activity here is look different you can read any book. It is really fun in your case. If you enjoy the book which you read you can spent all day long to reading a reserve. The book Microsoft .NET - Architecting Applications for the Enterprise (Developer Reference) it is very good to read. There are a lot of folks that recommended this book. We were holding enjoying reading this book. In the event you did not have enough space to create this book you can buy the e-book. You can m0ore easily to read this book through your smart phone. The price is not to fund but this book possesses high quality.

Janet Warren:

Your reading 6th sense will not betray an individual, why because this Microsoft .NET - Architecting Applications for the Enterprise (Developer Reference) book written by well-known writer who knows well how to make book which can be understand by anyone who all read the book. Written within good manner for you, dripping every ideas and writing skill only for eliminate your hunger then you still uncertainty Microsoft .NET - Architecting Applications for the Enterprise (Developer Reference) as good book but not only by the cover but also by the content. This is one book that can break don't ascertain book by its cover, so do you still needing one more sixth sense to pick this!? Oh come on your examining sixth sense already said so why you have to listening to another sixth sense.

Linda Justice:

As we know that book is essential thing to add our know-how for everything. By a e-book we can know

everything we would like. A book is a range of written, printed, illustrated or perhaps blank sheet. Every year seemed to be exactly added. This e-book Microsoft .NET - Architecting Applications for the Enterprise (Developer Reference) was filled with regards to science. Spend your free time to add your knowledge about your technology competence. Some people has various feel when they reading the book. If you know how big benefit from a book, you can sense enjoy to read a guide. In the modern era like at this point, many ways to get book you wanted.

Catherine Gober:

A lot of book has printed but it differs from the others. You can get it by web on social media. You can choose the very best book for you, science, comedian, novel, or whatever by means of searching from it. It is named of book Microsoft .NET - Architecting Applications for the Enterprise (Developer Reference). You can add your knowledge by it. Without leaving behind the printed book, it may add your knowledge and make you actually happier to read. It is most important that, you must aware about guide. It can bring you from one destination to other place.
